U2S SERIES

Combination Viewing Head / Signal Processor

Engineered for the Toughest Environments

The U2S Series is uniquely suited for a wide range of flame-detection applications. This all-in-one integrated processor and viewing-head solution features an intuitive touchscreen display and precise, reliable monitoring for single or multi-burner, multi-fuel, and challenging applications that require a high level of flexible discrimination.

Versatile options for models and sensors ensure you can optimize your flame monitoring for even the toughest applications. And as an all-in-one solution, the U2S Series eliminates the need for a separate processor, saving on cabinets and wiring while also simplifying installation and maintenance.

The U2S Series: Integrated Processor and Viewing Head for Versatile Flame Discrimination

The U2S Series is optimized for a wide variety of common applications, including industrial process boilers, co-gen boilers, cement or lime kilns, thermal oxidizers, flare stacks, and gas turbines. The U2S Series is also designed to excel in challenging flame-monitoring applications such as black liquor recovery and sulfur recovery.
